

Gluing Equipment

Clamp Rack

The QUICK Clamp Rack is our most compact and affordable gluing machine. It's moderate cost, ultra high-quality clamps (30 pounds each!), super-strong frame and efficient use of floor space make it the ideal gluing station for the smaller or custom shop. It's unique two-sided design provides maximum "room to work." QUICK Clamp Racks are available in 6', 8' and 12' widths, with 32" or 40" opening clamps.

Section Standard Clamp Carrier

Our Standard Clamp Carriers are our mid-size gluing machines. Providing the best bang-for-the-buck in the industry, they include zinc-plated, full box-frame clamps, super-fast 3000 RPM Pneumatic Clamp Tighteners, Pneumatic Panel Flatteners and Electric Motor Drives with Automatic Rotation Cycles. Standard width is 8.5'; standard clamp opening is 38"; other sizes are available. Available with 6, 14 or 20 sections. Expandable later to 14 or 20 sections.

Heavy Duty Clamp Carrier

Our Heavy-Duty Clamp Carriers are designed for high production and super durability. The frames (and clamps) on these machines are the heaviest and stiffest in the industry, with oversize frame rails and runways, 3" diameter front and rear shafts, heavy-duty chains with 2" wide rollers, large cast iron sprockets, and massive 6" I-beam legs. Pneumatic and Hydraulic Clamp Tighteners are available. Machine widths are available from 6.5' to 16.5'. From 6 to 80 sections, expandable.

Automatic Clamp Carrier

Our Automatic Clamp Carrier brings full automation to the panel clamping process. After loading the clamps with stock, the operator simply presses the "Cycle Start" button, which commences the machine's fully automatic clamp tightening, Carrier rotation, clamp loosening cycle.

Gluing Equipment (cont.)

Pod Press

Our Pneumatic Pod Presses are cost-effective machines for face-laminating various materials. QUICK Pod presses can produce a maximum 80 psi platen pressure, making them suitable for both light-duty and heavy-duty applications. Vertical daylight opening is adjustable via precise and long-lasting electrically-powered shaft-driven worm gear systems.

QUICK Spreader

Our QUICK Spreader is an inexpensive, quick-and-easy glue applicator. It is designed for use with our Clamp Racks and smaller Clamp Carriers. When its foot treadle is depressed, a stainless steel glue-applying grid rises up out of a reservoir of glue. The operator places several boards at once onto the grid, and a mesh pattern of glue is transferred to the bottom edges of the boards.

ConveyORIZED Glue Applicator

Our ConveyORIZED Glue Applicator automatically applies glue to the edges or faces of stock. It is designed for use with our medium- to large-size Clamp Carriers. They're elegantly designed, efficient and reasonably priced. Many different widths and lengths are available, with the "standard" unit being 20" wide, with 8' infeed conveyor and 8' outfeed conveyor.

Roller Coater Glue Spreader

Our Roller Coater Glue Spreaders apply precise coatings of water-based wood glues to the faces of flat stock. They are available for top-only or two-sided glue application, in widths of 17", 24", 36", 48", 54" and 63". A variable speed control is available. Standard vertical opening is 1.75", with 6" available.
